PROFILE SUMMARY

Versatile Software Engineer and IT Support Specialist with experience in backend development, system architecture, and technical support. Skilled in building scalable applications, managing databases, troubleshooting systems, and supporting business operations with reliable technical solutions. Strong ability to adapt across software engineering, IT infrastructure, and Microsoft-based environments.

EDUCATION

B.Sc. Computer Science — Gregory University, Abia State (2025)

Professional Diploma, Software Engineering — NIIT, Port Harcourt (2024)

PROFESSIONAL EXPERIENCE

Interspace Music — CTO / Backend Engineer (Nov 2023 – February 2026)

- Designed and implemented backend systems for a music distribution platform
- Built REST APIs for artist onboarding, releases, and streaming integrations
- Managed authentication systems and role-based access control
- Led a team of engineers and coordinated technical development
- Supported system maintenance and troubleshooting

JeeDrop (ExpressDrop) — Backend Engineer / Technical Lead (Jan 2024 – Present)

- Developed backend architecture for logistics SaaS platform
- Built and maintained dashboards for multiple user roles
- Integrated payment systems and handled transaction workflows
- Provided technical support and system optimization
- Monitored performance and resolved system issues

PROJECTS

Nerdwork+

- Developed backend systems for a digital content platform with in-app currency

Learn Support

- Built backend for accessibility-focused learning platform for students with disabilities who are willing to learn

Fuel IoT Monitoring System

- Designed IoT-based monitoring solution for fuel systems

JeeDrop

- Built Full SAAS dashboard for logistics company who don't have the online presence, they now have the online presence without writing a code or hiring a developer and still having their own company's customization

InterSpace CMS Dashboard

- Built a content management system for a music distribution company, giving artists the leverage to upload their songs to various streaming platforms in one move and also view the stats and analysis of their tracks from various countries. Admin also has their own dashboard where they can be able to control the system and overview the analysis of the system with just a glance.

EpiXa

- Built an AI address verification system, with just a selfie and pictures of your documents and the help of GPS, it verifies your address and provides you with full address verification document, EpiXa also integrates a third party KYC system for platforms.

TECHNICAL SKILLS

Software Development:

Java (Spring Boot), Node.js, NestJS, REST APIs, TypeScript

Databases:

MySQL, MS SQL Server, PostgreSQL

Frontend & Tools:

React, TailwindCSS, Git, Postman

IT Support & Systems:

System troubleshooting, debugging, deployment, basic networking, user support

Microsoft & Productivity:

Microsoft Office (Excel, Word, PowerPoint), basic data analysis, reporting

Other:

Clouinary, Paystack Integration, SaaS Architecture, Authentication Systems
